Stone Care and Maintenance Guide

To ensure satisfaction with KORE QUARTZ®, it is best to follow our Care and Maintenance Guidelines. By following our guidelines, you will keep your countertops looking great for years to come.

AS WITH ANY STONE AND QUARTZ SURFACE, THERE ARE A FEW SPECIAL POINTS TO CONSIDER.

PRACTICAL AND SIMPLE TO CLEAN:

For daily cleaning, simply wet a washcloth with warm, soapy water. You usually won't need anything more than a gentle soap solution.

For the more difficult cleanups, KORE QUARTZ® suggests a non-abrasive cleaning pad combined with mild liquid soap and warm water. A combination of 1/3 vinegar to 2/3's water should work as an effective cleaner for those who are environmentally conscious.

For tricky food spills, use a non-abrasive gel, like Soft Scrub Liquid Gel with Bleach, apply to a damp sponge and wipe stain up. Be sure to rinse your countertops clean of the Soft Scrub Liquid Gel by using warm water and dry with a soft cloth. Do not let it sit, do not leave the gel on the surface for more than one minute.

Bar Keeper's Friend Soft Cleanser is an authorized nonabrasive cleaners that will not dull the finish on your KORE QUARTZ® surface. Apply Bar Keeper's Friend with a cloth, sponge, or White Scotch-Brite pad. DO NOT apply with Red or Green Scotch-Brite pads as they contain abrasives.

Because quartz surfaces are very hard, we understand that is can be tempting to chop, cut and dice food directly on its surface. KORE QUARTZ® surfaces are not made for chopping, cutting and dicing foods. All quartz products are NOT scratch proof, but scratch resistant. Additionally, KORE QUARTZ® surfaces are harder than kitchen knifes, so please keep knifes from going dull by using a cutting board.

For daily cleaning, simply wet a washcloth with warm, soapy water. You usually won't need anything more than a gentle soap solution.

To protect your KORE QUARTZ® countertops for hot temperatures, we recommend using trivets, or hot pads to place your hot pans, fryers, toaster ovens and electric skillets on.

KORE QUARTZ surfaces are the ultimate combination of nature and technology. Nonporous, scratch resistant and highly resistant to stains, Kore Quartz retains its beauty without sealants or waxes with little maintenance.
